No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc. (27 Congress Street, Salem, Massachusetts 01970), for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-1991 articles are as shown on the article title pages; if no fee code appears on the title page, the copy fee is the same as for current articles.

This journal is printed on acid-free paper.

CONTENTS OF VOLUME 42

Number 1, July 1991

VLADIMIR B. SERIKOV. Porous Phase Model of the Lung Interstitial Fluid Motion 1

ZONG-YI YAN, ANDREAS ACRIVOS, AND SHELDON WEINBAUM. A Three-Dimensional Analysis of Plasma Skimming at Microvascular Bifurcations 17

SANJAY BATRA AND KAREL RAKUSAN. Geometry of Capillary Networks in Volume Overloaded Rat Heart 39

HSIN-SU YU, SEN-AN YANG, GWO-SHIN CHEN, AND SHIEH-TSONG HO. Effects of Temperature on Cutaneous Microcirculation in Vibration Syndrome 51

I. C. MACDONALD, E. E. SCHMIDT, AND A. C. GROOM. The High Splenic Hematocrit: A Rheological Consequence of Red Cell Flow through the Reticular Meshwork 60

MOGES BIZUNEH, H. GLENN BOHLEN, BRET A. CONNORS, BRYAN G. MILLER, AND ANDREW P. EVAN. Vascular Smooth Muscle Structure and Juvenile Growth in Rat Intestinal Venules 77

HAZEL LUM, ALMA SIFLINGER-BIRNBOIM, FRANK BLUMENSTOCK, AND ASRAR B. MALIK. Serum Albumin Decreases Transendothelial Permeability to Macromolecules 91

VOLKER NEHLS AND DETLEV DRENCKHAHN. Demonstration of Actin Filament Stress Fibers in Microvascular Endothelial Cells *in Situ* 103

BRIEF COMMUNICATION

T. R. BLAKE AND E. HATZIMANOLAKIS. A Theory for Fluid Transport through Interstitial Connective Tissue 113

Number 2, September 1991

SATORU SUNANO, KENZO MORIYAMA, AND KEIICHI SHIMAMURA. The Relaxation and Ca-Pump Inhibition in Mesenteric Artery of Normotensive and Stroke-Prone Spontaneously Hypertensive Rats 117

MASAYUKI SUZUKI, HIROSHI ASAKO, PAUL KUBES, STEPHEN JENNINGS, MATTHEW B. GRISHAM, AND D. NEIL GRANGER. Neutrophil-Derived Oxidants Promote Leukocyte Adherence in Postcapillary Venules 125

ROGER C. WAGNER AND SHIH-CHIEH CHEN. Transcapillary Transport of Solute by the Endothelial Vesicular System: Evidence from Thin Serial Section Analysis 139

RUI-JUAN XIU, CHENG JUN, AND OVE BERGLUND. Microcirculatory Disturbances in AIDS Patients—A First Report 151

ANN L. BALDWIN, NING Z. WU, AND DANIEL L. STEIN. Endothelial Surface Charge of Intestinal Mucosal Capillaries and Its Modulation by Dextran 160

L. E. STAXRUD, K. KVERNEBO, AND E. G. SALERUD. Acute Effects of Local Tissue Trauma on Skin Perfusion Evaluated with Laser-Doppler Flowmetry 179

Gail E. Besner and Michael Klagsbrun. Macrophages Secrete a Heparin-Binding Inhibitor of Endothelial Cell Growth 187

Technical Report

Piero M. Armenante, Daekyung Kim, and Walter N. Durán. Experimental Determination of the Linear Correlation between *in Vivo* TV Fluorescence Intensity and Vascular and Tissue FITC-DX Concentrations 198

Brief Communications

D. G. Taylor, J. L. Bert, and B. D. Bowen. Interstitial Plasma Protein Concentration Profiles and Transport Mechanisms 209

Per Malcherek and Lennart Franzén. A New Model for the Study of Angiogenesis in Connective Tissue Repair 217

Urban Gustafsson, Karin Wårdell, Gert E. Nilsson, and David H. Lewis. Vasomotion in Rat Skeletal Muscle Induced by Hemorrhage as Recorded by Laser–Doppler Flowmetry 224

Number 3, November 1991

Ruth B. Caldwell and Malinda E. C. Fitzgerald. The Choriocapillaris in Spontaneously Diabetic Rats 229

Toshiaki Iba and Bauer E. Sumpio. Morphological Response of Human Endothelial Cells Subjected to Cyclic Strain *in Vitro* 245

Janice A. Jerdan, Ronald G. Michels, and Bert M. Glaser. Extracellular Matrix of Newly Forming Vessels—An Immunohistochemical Study .. 255

Michael M. Graham and Margaret L. Evans. A Simple, Dual Tracer Method for the Measurement of Transvascular Flux of Albumin into the Lung 266

Hideo Shimizu, Koichiro Mimoto, and Takeshi Yokoyama. Topological Difference in the Three-Dimensional Sinusoid Structure between Normal Human Liver and Hepatocellular Carcinoma 280

Steven D. House and Herbert H. Lipowsky. Dynamics of Leukocyte–Endothelium Interactions in the Splanchnic Microcirculation 288

Arno Villringer, Ulrich Dirnagl, Andreas Them, Ludwig Schürer, Fritz Krombach, and Karl M. Einhäupl. Imaging of Leukocytes within the Rat Brain Cortex *in Vivo* 305

Eugene S. Chung, Susan E. Leeman, and Henri F. Cuénoud. The Effect of Neonatal Treatment with Capsaicin on Focal Arteriolar Insudation 316

Brief Communication

L. A. Roberts. Methylene Blue Stains Some Vascular Smooth Muscle Cells in Rabbit Coronary Arteries and Arterioles 325

Announcements 330

Cumulative Subject Index for Volumes 41 and 42 333

Information for Contributors

Microvascular Research (MVR) is an international journal dedicated to the dissemination of fundamental information related to the microvascular field.

Submission of Manuscripts. One original and two complete carbon copies should be sent via first-class mail, in flat form, to **Microvascular Research Editorial Office, Dr. David Shepro, 2 Cummington St., Boston University, Boston, Massachusetts 02215.** MVR will not be responsible for manuscripts lost in the mails.

Original papers only will be considered. Manuscripts are accepted for review with the understanding that the same work has not been and will not be nor is presently submitted elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in *Microvascular Research* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Manuscript Style. Papers should be typewritten, double-spaced on one side of the paper, with wide margins. The manuscript should be divided into the following sections: Abstract, Introduction, Materials and Methods, Results, Discussion, References, and Acknowledgments. The abstract, which will precede each article, should be 225 words or less and should be typed on a separate sheet. In addition the manuscript should include, on separate pages, (1) the complete title with names of authors and affiliations (including ZIP CODE), (2) running title, consisting of no more than 40 characters including spaces, (3) key words that are suitable as **Index Descriptors,** and (4) the address to which proofs are to be mailed.

Tables. Tables are to be typed on separate sheets and numbered with Arabic numerals. Each table should contain an explanatory title that would make reference to the text unnecessary.

Figures. These should be numbered with Arabic numerals and should be mentioned consecutively in the text. Legends are to be typed together on a separate sheet.

Illustrations, drawn with a lettering set, should be in finished form ready for photographic reproduction. Lettering on the original drawing should be large enough (minimum, 4 mm) to be legible after reduction to one-third. Graphs should be plotted with black India ink on light blue coordinate paper, no larger than 8.5 × 11 inches, with coordinates properly labeled; grid lines that are to show in the photoreproduction should be inked in black.

Photographs should be submitted as glossy prints and not marred by staples, paper clips, or pencil marks. For best reproduction of halftones, provide clear, sharp photographs with adequate contrast. The best results will be obtained if authors match the contrast and density of all figures appearing on a single plate. If this is not possible, please provide unmounted original art. Providing an overlay that indicates the most critical areas of micrographs will also aid in ensuring high-quality reproduction. The dimensions of the printed page are 5 × 8 in. (127 × 203 mm). It is recommended that micrographs be submitted as near as possible to this size so that large reductions will not be necessary.

Illustrations in color can be accepted only if the authors defray the cost.

Footnotes. These should be designated in the *text* by superscript *numbers* and typed on a separate sheet; in the tables by superscript *letters* and typed at the bottom of the table.

Abbreviations. In general these should follow the usage employed by Chemical Abstracts. The *Style Manual,* 1986, of the American Chemical Society is also an acceptable guide.

References. Citations in the text consist of the author's name, and the year of publication in parentheses. The references should be listed alphabetically and should conform to the following style:

GRAYSON, J., AND LEVESON, M. (1985). Functional and morphological changes in the microcirculation of the dog following acute coronary artery ligation. *Microvasc. Res.* **29,** 161–175.

ALLEN, J. C., AND BUKOSKI, R. D. (1982). Current status of vascular smooth muscle subcellular calcium regulation. *In* "Vascular Smooth Muscle: Metabolic, Ionic, and Contractile Mechanisms" (M. F. Crass III and C. D. Barnes, Eds.), pp. 99–134. Academic Press, New York.

Abbreviations of journal names should follow the style of *Chemical Abstracts Service Source Index*, 1985. Unpublished observations and personal communications should be cited in the *text* as such.

Proofs. Proofs will be sent to the author with a reprint order form. Authors will be charged for alterations in excess of 10% of the cost of composition.

Reprints. Fifty reprints of each article (without covers) will be supplied free of charge. Additional reprints may be ordered. A reprint form will accompany the proofs.

Brief Communications. Preliminary reports will be reviewed for prompt publication; however, the comments must be restricted to no more than five typewritten pages, including references, tables, and illustrations. No abstract should be included.

To facilitate the publication of manuscripts, especially those papers based upon a new, theoretical concept, the Editors invite each contributor to submit the names of at least three scientists who could review the submitted manuscript.
